

**OUTPATIENT  
INTEGRATED  
STRATEGIES**

# Issues Impacting Infusion Services

*Hospital administrators must confront serious challenges that affect patient care and the economic viability of the facility:*

- Lack of continuity of care after discharge
- Minimization of readmission rates
- Increasing complexity of infusion products and their delivery
- Deficiency of physician oversight in home health and infusion services
- Necessity for safe, effective treatment models and alternatives to hospitalization

## INNOVATION IN OUTPATIENT CARE

A successful hospital outpatient infusion program can manage patients who require complex care in an outpatient setting. As a physician-led effort, Outpatient Integrated Strategies (OIS) has the experience and expertise to implement a collaborative, successful outpatient infusion program that will:

- Improve coordination of care
- Prevent unnecessary hospitalizations & readmissions
- Provide physician oversight
- Reduce hospital costs

## AN OIS INFUSION CARE SERVICES PROGRAM DELIVERS THE FOLLOWING THERAPIES:

- Antibacterials
- Antifungals
- Antivirals
- Iron
- Intravenous fluids
- Immunomodulators
- Biphosphonates
- Immunoglobulin

*Customers that implement both OIS Infusion and Wound programs maximize their outcomes, both clinically and financially. Let OIS put our data driven model to work for your bottom line.*
